

Tableau Guided Evaluation; A Free Assessment of The Leading Self-Serve BI Solution

Why Conduct A Tableau Guided Evaluation

While standard demonstrations can be helpful in understanding the capabilities and functionality of visualisation tools, a rigorous evaluation that uses your own data, your own people, your own environment and addresses your real world business requirements is hard to beat. Inflexion Analytics deliver this through our Guided Evaluation of Tableau and helps you evaluate the impact Tableau could have on your organisation. Throughout a Tableau guided evaluation your team gets the chance to get hands-on with the product. We work with your team collaboratively from the start, giving key stakeholders the chance to interact with and learn the tool, giving you the basis for a real judgement and a springboard from which value can be happily realised.

We help you evaluate Tableau as an enterprise solution in just two weeks by delivering production ready solution on your own data without investing anything in the tool. This gives you the opportunity to see:

- The power of Tableau visualisations
- The ease and speed of use of Tableau
- The practical realisation of requirements
- The ease of integrating Tableau

Guided Evaluation Deliverables

The guided evaluation may only last two short weeks but within this time we will demonstrate the value of the Tableau platform using both Tableau Desktop and Tableau Server. The programme deliverables provide a springboard into full adoption of the solution, if desired, at the end of the evaluation. These include:

1. Configuring Tableau Desktop & Tableau Server in your environment
2. Developing initial dashboards based on your business requirements
3. Demonstrating self-serve capability of Tableau
4. Building your understanding of Tableau
5. Presenting the outcome to stakeholders

How We Deliver A Successful Guided Evaluation

We work collaboratively with your team throughout the guided evaluation. This allows your team to gain direct experience of Tableau.

Following a preparatory meeting to discuss and understand your business requirements and data sources. We complete the following steps over the two-week evaluation period:

- Kick off, Hands-on Tableau introductory session with identified power users
- Agree initial dashboard design and start collaborative development sessions
- Work in partnership to deliver initial dashboards
- Host Tableau dashboards in a trial server and share access with key business users
